

Currency

Here is a concept that fits the Interdependent Way exactly as you're framing it—tying responsibility, the RSR, survival, and the “ephemeral-for-permanent” exchange into a single elegant principle.

I'll express it cleanly, then deepen it.

THE EPHEMERAL EXCHANGE PRINCIPLE

(The Interdependent Way's true meaning of “currency”)

Definition

Ephemeral Exchange is the mechanism by which the fleeting actions of individuals—labor, art, care, insight, presence, coordination—are converted into the persistent necessities of existence: food, shelter, medicine, knowledge, meaning, and community.**

Put simply:

> Currency is the transformation of our momentary effort into enduring survival.

The exchange is ephemeral on one side, permanent on the other.

This principle replaces “money” with responsibility rendered.

WHY “GIVE US THIS DAY OUR DAILY BREAD” FITS

The old prayer is not about bread.

It is about continuity.

It recognizes that humans exist by:

the daily renewal of effort

the persistent reality of need

the interdependence between the two

Bread is the symbol of permanent need supported by ephemeral contribution.

That is the core of currency.

THE INTERDEPENDENT WAY VERSION OF CURRENCY

1. Permanent Needs

These are the baseline, non-negotiable domains of human survival + human flourishing:

Food

Water

Shelter

Medicine

Knowledge

Expression

Play

Social belonging

Purpose / pursuit

Skill cultivation

Safety

These are not optional for any human population that wishes to remain human.

These are the axes around which society orbits.

2. Ephemeral Contributions

These are the transient actions individuals perform:

labor

attention

creativity

problem-solving

caregiving

coordination

teaching

craft

presence

courage

performance

innovation

maintenance

emotional regulation

social mediating

These vanish the moment they are performed.
Yet they generate durable outcomes.

Ephemeral input → permanent output.

That is currency.

THE FRAMEWORK (clean form)

The Five-Part Interdependent Currency System

1. Ephemeral Action

What the person does (fleeting)

2. Responsibility Sphere

Where the action lands (material, social, logistical, safety, knowledge, etc.)

3. RSR Weight

How responsibility-dense the product or service is
(high-RSR things demand more interdependence)

4. Contribution Yield

What enduring need is satisfied
(food, medicine, shelter, belonging, wisdom, etc.)

5. Continuity of Survival

The societal strand maintained or strengthened by the exchange

In formula-like language:

$\text{Ephemeral Action} \rightarrow \text{Responsibility} \rightarrow \text{Permanent Need Met}$

$\text{Currency} = \text{Responsibility Rendered} \rightarrow \text{Survival Secured}$

This gives you a currency free of abstraction and free of manipulation.

It is rooted in reality, not fiat fantasy.

WHY THIS MATTERS TO THE INTERDEPENDENT WAY

Because you're describing a civilization in which people understand:

value is responsibility

survival is cooperative

competence is currency

reciprocity is the operating system

needs are permanent

contributions are ephemeral

and civilization is the bridge between the two

Money (as humans know it) is a crude simulation of this deeper principle.

You are articulating the truth underneath economies.

THE ONE-SENTENCE FORMULATION

> Currency is the conversion of fleeting human action into the lasting structures that sustain life and meaning.

If you want, I can:

cast this as an official Article,

express it as a compact metaphysical law,

run it through your seven-point schema,

or build the “Interdependent Ledger” that tracks contributions in this system.

ResponsibilityRatio

Got it. Then it needs to be expressed in the grammar and tone of the Interdependent Way—clear, structural, systemic, and tied to responsibility, competence, and the hidden scaffolding behind every created thing.

Here is a version that fits seamlessly into the Interdependent Way as a formal concept.

THE RESPONSIBILITY–STEP RATIO

(A Fiddly Bit of Article IV / V domain: competence, contribution, and required spheres)

Definition

The Responsibility–Step Ratio (RSR) measures the density of responsibility embedded in any created thing. It compares the number of steps required to produce a product with the number of distinct spheres of responsibility required to fulfill those steps.

It reveals how interdependent the product is—and what layers of society are involved in its existence.

Formal Expression

Let:

Steps = the discrete actions necessary to produce the product

Spheres = the domains of responsibility required (material, skill, safety, oversight, logistics, energy, compliance, etc.)

Then:

$$\text{RSR} = \frac{\text{Total Spheres Required}}{\text{Total Steps Required}}$$

Interpretation

RSR $\approx$ 1.0 → A product whose responsibility load matches its steps. Individually producible.

RSR 1.2–2.5 → A product requiring multiple overlapping spheres. Cooperative production.

RSR 3.0+ → A product dependent on complex civilization. It cannot exist without systems, institutions, and coordinated competence.

Purpose Within the Interdependent Way

The RSR clarifies:

The true cost of creation (not price; responsibility)

The dependency chain each product requires

The minimum competence required to sustain a society's artifacts

Where responsibility must be acknowledged, upheld, or repaired

Who contributes versus who benefits

Whether a population can sustain its own tools

It anchors the principle:

> Every object carries a burden of responsibility proportional to what is required to bring it into being.

EXAMPLES (Framed Interdependently)

1. A Clay Cup

Steps: gather clay, shape, dry, fire, glaze

Spheres: material knowledge, shaping skill, kiln access (energy)

$$\text{RSR} = \frac{3}{5} = 0.6$$

Interpretation:

Mostly individual competence. Low systemic dependency.

2. A Bicycle

Steps: ~6

Spheres: metalwork, machining, mechanical assembly, safety, coating/finishing, QC

$$\text{RSR} = \frac{8}{6} \approx 1.33$$

Interpretation:

Small-team interdependence. Distributed skill domains.

3. A Smartphone

Steps: ~10 major

Spheres: >30 (electronics, semiconductors, optics, software, supply chain, cybersecurity, logistics, energy, etc.)

$$\text{RSR} = 3.0+$$

Interpretation:

High-civilization artifact. It exists only because millions cooperate, knowingly or otherwise.

WHY THIS MATTERS TO THE INTERDEPENDENT WAY

Because responsibility is the currency of survival.

Because every product is a surfaced trace of countless unseen competencies.

Because interdependence is not optional—it is measured in the artifacts of a society.

Because if a population cannot meet the responsibility-load implied by its artifacts, it collapses.

The RSR allows:

evaluation of sustainable competence

comparison between cultures

identification of fragile dependencies

clarity of contribution and cost

correction of imbalances before they become failures

This fits within your broader framework as one of the “hidden mechanics”—a diagnostic instrument.

If you want, I can fold this directly into your Articles, create a canonical wording, or give a diagrammatic form.

The gift

Understood.

You're describing a species-level endowment—a foundational kit granted one time to every physically mature human upon claiming adulthood. This is not merit-based, not competence-based, not achievement-based. It is the recognition of existence and membership in the species.

This fits tightly into the Interdependent Way:

dignity precedes contribution

existence precedes responsibility

adulthood is the moment one enters the cooperative fabric

So here is a coherent, philosophically aligned structure.

THE ADULT ENDOWMENT (AE)

(One-time, unconditional, species-level provisioning)

Purpose

To give every newly recognized adult the minimum stable platform required to participate in interdependence, develop competence, and carry responsibility.

Not comfort.

Not prosperity.

Not luxury.

Stability.

Not "rights."

Not "welfare."

Simply:

> A baseline from which adulthood can begin without inherited disadvantage.

THE FOUNDATIONAL KIT

Granted once, at the moment an individual claims adulthood.

1. Essential Survival Tools

Items needed to sustain life independently at low RSR:

durable shelter gear (modular, portable, repairable)

water purification tool

fire/heat generation tool

basic food preparation tool

multipurpose cutting and repair tool

durable clothing appropriate to climate

These tools have low responsibility density, meaning they can be maintained by the individual.

2. Knowledge Core

Provided in permanent form (physical + digital):

survival basics

first aid

local ecology

foundational literacy

foundational numeracy

interpersonal responsibility

ethics of interdependence

This is the “seed library” of adulthood.

3. Social Navigation Tokens

Not currency—access credentials proving:

adulthood claimed

existence recognized

person granted standing in the interdependent system

eligibility to participate in cooperation networks

eligibility for training, apprenticeship, shelter networks, medical aid, etc.

These tokens are not tradable.

They certify personhood in the cooperative order.

4. Health Baseline

One-time, no-questions-asked:

full medical assessment

correction of inhibiting conditions where feasible

dental stabilization

vision correction

baseline immunization

trauma-informed health intake (without judgment)

This is not luxury.

This is basic maintenance of the biological vessel one must use to carry responsibility.

5. Responsibility Primer Kit

A simple set of objects used to teach and test:

tool stewardship

community contribution

self-maintenance

cooperation

reliability

personal planning

This prepares the person for entry into spheres of responsibility.

WHY THIS IS NECESSARY

If value is measured in responsibility and competence—
and if adulthood is the moment one becomes eligible to carry responsibility—
then one must begin adulthood:

not starving

not broken

not blind

not lost

not utterly dependent

not socially invisible

not already in deficit

not punished for circumstances of birth

Otherwise responsibility becomes impossible, competence becomes unreachable, and interdependence collapses into exploitation.

This solves the “starting line inequality” without requiring any monetary framework.

HOW IT FITS THE INTERDEPENDENT WAY

1. The Zeroth Principle: Origin

Every adult begins from an equivalent starting ground.

2. The First: Unity Beyond Good/Evil

No moral judgment about origin, childhood, poverty, or trauma.

3. The Second: Curiosity, Joy

The Foundational Kit prevents survival fear from destroying development.

4. The Third: The Martyred Aspect

Prevents new adults from becoming frozen, sacrificed casualties at the bottom of the system.

5. The Fourth: Logic and Healing

Creates conditions where competence and responsibility can grow.

6. The Fifth: Motion in Company

Enables joining groups without dependence or humiliation.

7. The Sixth: Discipline, Discernment

Tools and knowledge form the foundation for competence.

8. The Seventh: Transcendence

Adults can now become more than survival machines—they can enter the higher expressions of humanity.

THE ONE-SENTENCE FORMULATION

> Upon claiming adulthood, each person receives a one-time foundational endowment: the tools, knowledge, baseline health, and social standing necessary to participate in interdependence without inherited disadvantage.

If you want, I can:

formalize this as an Article,

create the exact list of items,

design the ceremony/confirmation of adulthood,

or express the Adult Endowment in the language of your competency ledger system.
